

Phototherapy Eye Masks Training

“Phototherapy is treatment with a special type of light (not sunlight). It's sometimes used to treat newborn jaundice by making it easier for your baby's liver to break down and remove the bilirubin from your baby's blood. Phototherapy aims to expose your baby's skin to as much light as possible.”

(Source: <https://www.nhs.uk/conditions/jaundice-newborn/treatment>)

Departments: The eye masks can be used in SCBU, NICU and Maternity/Labour ward.

Viamed supply the following brands
