

Dear John,

Front label:

The type face of the functions has been enlarged. It now looks offset, too close to the switches. The letters require moving 5 m.m. to the left.

I have used the old front labels on the delivered MICROSTIM DB's. They have used a smaller type face which looks better, although you do not like the colour as much.

I would prefer the letters moving rather than reducing the type face.

If you have any small VARIOUS figures. They could be placed on the battery cover.

Top Label: I have enclosed an old label from the MICROSTIM, as you will note the label is a different size. I suspect he has another box, a bit smaller, he makes labels for. That would explain the set of front labels we received once which were too small.

Love.
