**THE THERMACOT TC 400 Mk 1
NEW LOW COST OVERHEAD BABY WARMER**

The THERMACOT is designed to provide a simple effective method of reducing radiant heat loss from infants nursed on the Paediatric Ward or Special Care Baby Unit.

The combination of a 400 Watt heating element and an efficient reflector ensures a safe and uniform warmth within the cot area which will raise the surface temperature by about 10°C above the ambient temperature at maximum output.

The 400 Watt radiant warmer is provided with a variable heat control to facilitate the reduction of heater output when required and enable standby operation.

Mounted on a lightweight mobile stand, the cot and the integral radiant warmer can be angled forward from the horizontal to a maximum of 15 degrees.

The THERMACOT is fitted with four antistatic castors (two incorporating locking brakes) and a useful clear acrylic shelf.
