

Soft, safe and secure

Superior eye
protection
for neonatal
phototherapy

Introducing the Biliband™ Eye Protector by Nascor

Biliband™ Eye Protector provides neonates with the best protection from visible light¹, making it the safest phototherapy mask available.

Independent light transmission tests have shown Nascor's Biliband™ Eye Protector blocks out more light than all other leading brands of phototherapy mask.

Leading brands tested were Posey, Neotech and Sentry.

The special eye-pad material blocks visible light to the eyes, whilst the headband allows the phototherapy light to reach the baby's head.

The unique Y-shaped design and elastic fabric ensure Biliband™ Eye Protector remains securely in place, providing continuous eye protection for the baby.

Biliband™ Eye Protector is made from a specially constructed hypoallergenic and latex-free bandage-type material – soft and comfortable on the baby's head and face with no risk of skin irritation.

With easy-to-use adjustable tabs, Biliband™ Eye Protector is designed for the perfect fit, no matter what the shape of the baby's head, face and nose. It's available in two sizes – Regular and Premature.

Product type	Regular Biliband™	Premature Biliband™
Head circumference	30 – 38 cm	24 – 33 cm
Catalogue no.	B 001	B 002
Pack size	20 units	20 units

¹ Independent study conducted by leading Australian university optics laboratory.
