### Warranty conditions of our oxygen sensors

Dear customer,

Please take note of our warranty conditions of our oxygen sensors.

Type	max. Quality-Warranty	Storage time window for Distributors
Standard O <sub>2</sub> -sensor	15 months	3 months
OOM107	12 months	3 months
OOM109	9 months	3 months

The warranty time period of our oxygen sensors begins with the date of manufacture. You can find the manufacturing date in follow form on the labelling:

XXXX-YY

XXXX -> year; YY -> month

With private labelled sensors could be the verification of manufacturing date by serial number coding.

The specified nominal sensor life times of our different sensor types are validated under standard condition (1013 hPa, 25°C and dry ambient air). You can find the specifications with information about nominal sensor life time of every type of our oxygen sensors under [www.envitec.com](http://www.envitec.com).

The life time in use could be differing from the specified nominal lifetime because of the ambient conditions in use. High ambient temperatures and high oxygen concentrations have an influence on the sensor life time.

In praxis the life time of our standard O<sub>2</sub>-sensors, depending on ambient conditions, amount from 20 to 36 months.

With kindest regards,

EnviteC-Wismar GmbH
