

Disposable EEG Sensors

for monitoring the depth of anaesthesia as well as acquisition and transmission of biological EEG signals

- BIS EEG sensors compatible with a wide range of BIS™ monitors and modules (* see overleaf)
- GE Entropy Compatible
- Clinically tested, high-measurement accuracy
- Soft and bio-compatible material
- Latex-free

Disposable, single-use EEG sensors are specifically designed for anesthesiologists and medical professionals to monitor and assess the depth of anaesthesia in patients using the Bispectral Index™ (BIS) derived from the EEG signals. This provides real-time information about the patient's consciousness and electrical brain activity during surgical procedures.

The range also include Entropy sensors for use with GE Entropy Module which measures these changes by quantifying the irregularity of EEG and FEMG signals.

MK-04 (Bilateral) tested to be compatible with the following:

Medtronic Stand Alone Monitors & OEM Modules with 4 Channel Coverter Box

MK-03 Entropy is tested to be compatible with the following:

M1174413 Entropy EasyFit Sensor
 M1174414 Entropy EasyFit Sensor Start Up Kit

MK-C-080 Entropy is tested to be compatible with the following:

M1038681 Entropy EasyFit Sensor
