

UPS Calculator

When a UPS price is required, provide Goods Out with the part numbers and quantities of the products required and the destination country; request weights and dimensions of the box.

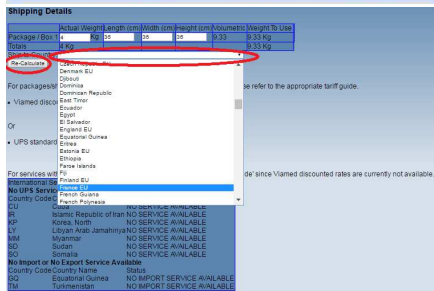

From Intrastats, click on the 'Stock' icon and select 'UPS Shipping Calculations'

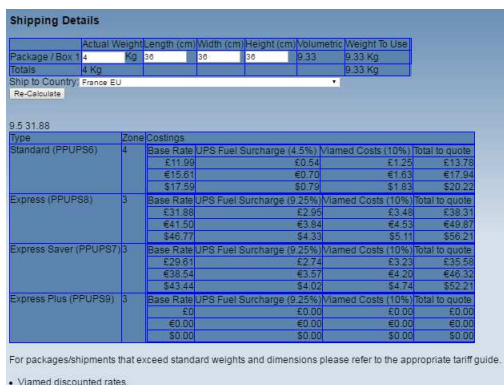

Enter the number of boxes required as per Goods Out and click 'Next'

Enter the weight (kg) and the three dimensions (cm) given to you by Goods Out and click 'Next'

Select the country you intend to ship to and click 'Re-calculate'

You will be presented with a variety of shipping options. Any options which have a price of zero are not applicable services for the country selected. 'Expedited PPUPS10' should only be used when a customer gives the go ahead as it takes a long time to arrive.

Make notes on relevant paperwork of the weight, box size and initials of the Goods Out employee who provided the information.
