

Description of Device.

Generic name of device: Infant Resuscitation Unit

Model name: Tom Thumb

Model number: TT 480, TT 490

Brief description of device and other devices designed to be used in combination with it:

The Tom Thumb is an Infant Resuscitation Unit, designed to replace manual ventilation by the bag, mask and valve method.

It is intended for use in emergency resuscitation situations in such as Delivery rooms, Operating theatres, and Special Baby Care Units etc.

It is designed to control a flow of Oxygen from an external source. The flow being controlled, by the operator occluding one leg of a Tee on the mask, instead of the original, and usually uneven, method of bag compressions.

The Tom Thumb is available in Three Models dependant upon the Oxygen source outlet.
