# SBRI Healthcare: Oxygen monitoring management meeting 3

#### Location

Medilink Yorkshire & Humber Ltd, 3, Smithy Wood Drive, Smithy Wood Business Park, Chapeltown, Sheffield, S35 1QN

### **Date and Time**

10am-1pm, 10th February 2017

#### **Summarised actions (from this meeting)**

- ACTION PT & TW to put together presentation demonstrating results of the focus group & clinical interviews at next meeting to highlight findings for the technical team to follow up on.
- ACTION RK to keep a record of sleep study patient records for the data contained within them useful for identifying needs
- ACTION HE to approach a small number of parent/patients to get people signed up to the patient focus group for PT & TW
- ACTION TW & PT define a date for the validation focus group BEFORE clinical focus group takes place
- ACTION TW & PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually
- ACTION RK to book the CRF room 1-3pm for the patient concept selection session on Thursday 11<sup>th</sup> May. Other room is being booked by others within the hospital for the CPD
- ACTION PT begin filling in the Interim Report, then send round to ALL partners for feedback
- ACTION PT & TW to put interim report on the Agenda for next meeting for us all to go through together
- ACTION SN, HE and RK to monitor Ethics Submission and report on progress at next meeting.
- **ACTION SN** to do quarterly submissions for finance via PO number raised at Viamed. 2 payments to each partner at month 3 and month 6. Partners to itemise the bill for Viamed Travel Expenses, Lunches, Mileage, Other costs (focus groups) etc.

#### **Summarised actions (previous meeting)**

- ✓ **ACTION TW** put meeting request out for an internal concept selection meeting after meeting of 26<sup>th</sup> April (additional 2 hours meeting lasting until 3pm)
- ✓ ACTION TW share the clinical focus group protocol with the group at next meeting
- ✓ **ACTION HE** to send contact details of the Leeds & Barnsley clinicians (& Lee Richardson nurse for ventilated patients) to **TW** & contact details for Julia (retired nurse)
- ✓ ACTION TW to let RK know which lunch we want to order for the focus group
- ✓ **ACTION HE** to approach a small number of parent/patients to get people signed up to the patient focus group for **PT** & **TW**
- ✓ ACTION SN create spreadsheet for finance, showing total paid to each subcontractor per month
- ✓ ACTION SN to send a format for itemising costs to all partners so invoices are standardised
- ✓ ACTION ALL partners to invoice Viamed quarterly Prepare costs for **end of March**, including the correct **customer name** for each organisation
- ✓ ACTION TW & PT define a date for the validation focus group BEFORE clinical focus group takes place
- ✓ ACTION RK to take a look through methodologies for collecting clinical data relating to patient & carer anxiety when managing long term conditions feeding into Phase II application
  - o Self-care and monitoring at home really drives this agenda
  - o Might be worth putting these methodologies into Phase II project plan when designing a usability and human factors assessment need to assess the home monitoring capabilities of the parents
- ✓ ACTION PT begin filling in the Interim Report, then send round to ALL partners for feedback

## **Agenda**

No.	Item	Leader	Time
1.	Review of actions from previous meeting	All	10 min
	Marie III i Continu	A 11	10
2.	Matters arising – discussion of several items	All	10 min
	Project Scope		
	Discussion regarding approach in Phase I vs. Phase II. PT stressed the		
	importance of following a robust research process and aim for a more radical		
	project.		
	SN questioned whether it might be possible to deliver a		
	quicker/simpler solution in the shorter term, and look at something more radical in the medium to long term?		
	more radical in the median to long term.		
	Agreed it could be a combination approach – deliver something		
	quickly but aim for something more radical long term over Phase II.		
	The market research with clinicians will help to validate our		
	assumptions.		
	uss with provide		
	Agreed amongst the group that we do not want a "fuzzy back end" to		
	the project – need to be clear on the needs to feed into the design		
	inputs. Need to make sure we are clear on what we want to develop.		
	ACTION – PT & TW to put together presentation demonstrating results of		
	the focus group & clinical interviews at next meeting to highlight findings for		
	the technical team to follow up on.		
	Patient Cohort		
	Tatient Conort		
	HE talked about the patient cohort, and who we should be developing for:		
	There are a large numbers of asthma patients, but these are cheaper to		
	care for per head		
	There are a smaller number of chronically ill respiratory patients, but these are more expensive to care for per head.		
	these are more expensive to care for per nead.		
	Anonymised Sleep Study Records & Research approaches for assessing		
	patient's ability to self-care		
	All agreed that the anonymised sleep study records collected by RK were		
	extremely valuable in identifying needs		
	ACTION – RK to keep a record of sleep study patient records for the data		
	contained within them – useful for identifying needs		
	RK papers very useful for understanding how we can assess usability and		
	safety for self-care in home for a new device. There are techniques for		
	collecting this research which we can learn from.		
	Patient (2 <sup>nd</sup> ) Focus Group		
	1 aucht (2 ) Pocus Group		
	ACTION – HE to approach a small number of parent/patients to get people		
	signed up to the patient focus group for PT & TW		

<ul> <li>HE mentioned that inpatients and parents of inpatients could be approached nearer the time to bring them in</li> <li>HE and RK also pointed out that outpatients may be difficult to get hold of − they often live far away. We can potentially look at interviewing the patients instead − over the phone? They are good advocates so would be worthwhile approaching</li> <li>Concept Selection (3<sup>rd</sup>)Focus Group</li> <li>Reviewed the plan for the 3<sup>rd</sup> focus group − set date for Thursday 11<sup>th</sup> May when clinical CPD is also taking place.</li> <li>ACTION − TW &amp; PT define a date for the validation focus group BEFORE clinical focus group takes place         <ul> <li>HE look to book the session to tie in with a CPD session to get as many clinicians in the same room as possible</li> <li>ACTION − TW &amp; PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually</li> <li>Limit session to no more than an hour for each group − purely application.</li> </ul> </li> </ul>	
to get hold of – they often live far away. We can potentially look at interviewing the patients instead – over the phone?  They are good advocates so would be worthwhile approaching  Concept Selection (3 <sup>rd</sup> )Focus Group  Reviewed the plan for the 3 <sup>rd</sup> focus group – set date for Thursday 11 <sup>th</sup> May when clinical CPD is also taking place.  ACTION – TW & PT define a date for the validation focus group BEFORE clinical focus group takes place  HE look to book the session to tie in with a CPD session to get as many clinicians in the same room as possible  ACTION – TW & PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually  Limit session to no more than an hour for each group – purely

when clinical CPD is also taking place.  ACTION – TW & PT define a date for the validation focus group BEFORE clinical focus group takes place  • HE look to book the session to tie in with a CPD session to get as many clinicians in the same room as possible  ACTION – TW & PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually  • Limit session to no more than an hour for each group – purely	
clinical focus group takes place  • HE look to book the session to tie in with a CPD session to get as many clinicians in the same room as possible  ACTION – TW & PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually  • Limit session to no more than an hour for each group – purely	
<ul> <li>HE look to book the session to tie in with a CPD session to get as many clinicians in the same room as possible</li> <li>ACTION – TW &amp; PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually</li> <li>Limit session to no more than an hour for each group – purely</li> </ul>	
get as many clinicians in the same room as possible  ACTION – TW & PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually  Limit session to no more than an hour for each group – purely	
ACTION – TW & PT design two sessions (one for clinicians, one for patients) for the concept selection focus group to run individually   Limit session to no more than an hour for each group – purely	
patients) for the concept selection focus group to run individually  O Limit session to no more than an hour for each group – purely	
Limit session to no more than an hour for each group – purely	
selection	
o Put a buffer amount of time in between the two – collate all	
the notes and write some of it up	
○ Do the patient one in the afternoon – 13:30 to start well before	
school pick-up (parents of young children and older children	
who can advocate for themselves)	
o Thursday 11th May 10:30am for the clinical focus group	
(blocked out admin time)	
o Might get them for 30 mins to an hour	
ACTION – RK to book the CRF room 1-3pm for the patient concept	
selection session on <b>Thursday 11<sup>th</sup> May</b> . Other room is being booked by others within the hospital for the CPD	
others within the hospital for the CFD	
SBRI Healthcare Interim Report	
ACTION – PT begin filling in the Interim Report, then send round to ALL partners for feedback	
o Going to bring this to the next meeting and go through it	
together.	
ACTION – PT & TW to put interim report on the Agenda for next meeting for us all to go through together	
3. Ethics submission & contract HE, SN 10 mi	1
Submission goes to ethics, then HRA (Health Research Authority) then to local R&D board.	
Can't do the local sign off with the R&D board until they receive the contracts.	
Device is not the problem – it's that we need to include patients in the study. It	
is research (even with anonymous data) we are collecting data which we will be analysing.	
Phase II is easier generally speaking.	

	Materials – have they been used on children/skin before? When NIRI and Viamed are doing R&D work they need to make sure the materials are safe for use and have a known and quantified benefit.  Viamed have an indemnity insurance for the NHS which should allow them straight into Medical Physics.  ACTION – SN, HE and RK to monitor this and report on progress at next meeting.		
4.	Finance and invoicing arrangements	SN, PT	10 min
	SN suggested quarterly bills for costs  ACTION – SN to do quarterly submissions for finance via PO number raised at Viamed. 2 payments to each partner at month 3 and month 6. Partners to itemise the bill for Viamed – Travel Expenses, Lunches, Mileage, Other costs (focus groups) etc.		
5.	Review project tracker – activities vs. milestones	All	60 min
	Discussion regarding Patrick's competitor's report.  Discussion regarding patent law and strategies for patenting a future device.		
6.	Sensor fixation methods	SN	20 min
	SN reviewed the current range of sensors:  • 4 different products – neonate, infant, young child and adult • Samples of products to look at bringing to the focus group • Two things Steve thinks we could look at:  • Securing the optics in place  • Securing the entire probe together  • Hydrocolloid gel/hydrogel could take the 'rock' away from the optics on the finger etc.  • Optics are moving to 1mm 0.5mm size – very small • Could we look at a combination product? Wireless sensor is reusable but the interface is disposable • Line of sight for emitter and sensor – they can be put on a flat surface and reflect off the forehead for example back in at an acute angle, rather than straight through a digit in a straight line		
7.	Clinical interview questionnaire protocol	TW, PT	20 min
	Covered – several suggestions for adaptation of the questionnaire to ensure all areas are covered		
8.	Any other business	All	10 min
0	Data of next meeting (confirm)	A 11	5 min
9.	Date of next meeting (confirm)	All	5 min
