

HEADBOXES

Manufactured from transparent Perspex this range of Headboxes has been designed to give good, all round visibility of the infant. Edges are hand polished for smoothness. Adjustable neck apertures are standard and the Neonatal versions have sloping fronts to accommodate the infant's chin. A 22mm Oxygen inlet and Slots for IV & Ventilator tubing are built into the back panel. Side windows are available as an extra. Special non-standard sizes are manufactured on request.

Ordering Information and nominal sizes

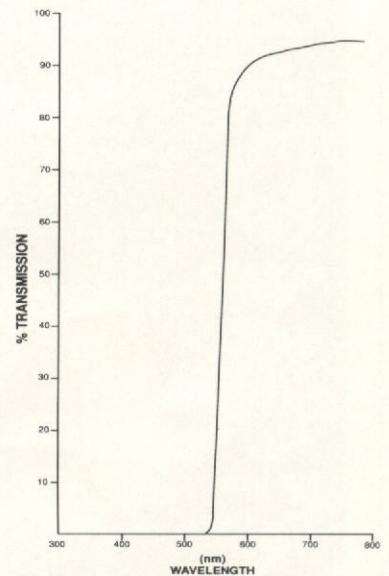

PP8000 Neonatal Headbox	H = 150mm (6")	W = 200mm (8 1/4")	L = 165mm (6 1/4")

PHOTOTHERAPY LIGHT SHIELD

Manufactured from Amber 300* perspex these shields are designed to reduce the intensity of light falling on the infant's eyes during Phototherapy.

The graph opposite is a typical response curve of Amber 300 when used with normal Phototherapy lamps. The range displayed shows the absorption over the Ultra Violet and Blue light regions in the range 300-500nm. Full spectral curve available on request.

Pt. No. PP-8400 Fits Neonatal Headbox **PP8000** 185mm (7 1/4") top length.

Pt. No. PP-8401 For use with open cots 110mm (4 1/4").
