Hello, Ms Lines.

Yes, I'm willing to take this risk.

Please kindly confirm if the price currency is British Pounds.

I have had a better experience with DHL shipment, if possible, I would rather do it with them.

I'm a little bit worried about Spanish customs because of Brexit. If the product is tagged or labelled as a "healthcare product", customs may ask for an "importing license" which my company lacks (it's a bureaucratic hell here), so the shipment should be identified as a regular replacement/spare part or whatever it is feasible. I would appreciate your opinion on this matter, as I guess you have some experience with other shipments to the EU or Spain.

Please amend the address invoice and delivery:

Miguel Ángel Martínez-Hervás Alonso

[Calle Recogidas No 8 3C](#)

Granada, CP 18002, Spain

Please let me know if to confirm the purchase I just have to do the bank transfer to: GB33BUKB20784287399700.

Thank you for your help.

Kind regards.

Un saludo.

Miguel Ángel.

Dear Miguel,

Further to my previous email, our director has advised that if you would like to proceed with the purchase of the OOM109-LF2 (our part number 0110566), you are welcome to do so at your own risk, as you mentioned.

As we are not aware of the technical specification differences between this sensor and your current model—or whether any differences may be significant—we are unable to confirm if it is a suitable equivalent.

Please find attached a quotation for 1 × OOM109-LF2, including carriage costs. I have used the address available online for this.

If you would like me to amend anything on the quotation, please let me know.

Kind regards

Hello, Ms Lines.

Thanks for your reply.

I will bother you just one more time.

I removed the Geratherm sticker and I checked there is a "M109" number under it, which makes me think about OOM109 (see attached). It may not be a coincidence. **I know for sure that Geratherm doesn't manufacture any O2 sensor, as it shows "Honeywell" on the sticker.** It's very likely that we're facing a re-branding (they just placed a sticker).

Are you totally sure that the specifications are different?

I asked two AIs and they said that the main difference is the delay time, but that this time is lower for Geratherm thanks to a "software trick" of its BlueCherry software. I trust your opinion way more than an AI (or two) guesses, of course.

If the specifications of both sensors are slightly different, I may be **willing to take the risk** of buying one and trying it. If it works, I would buy one every year.

Your help on this matter is much appreciated.

Kindest regards.

Un saludo.

Miguel Ángel.

Good afternoon,

Thank you for your email. I have checked this with our commercial director, and unfortunately, we do not supply an equivalent sensor to the Geratherm 318415. The OOM109-LF2 does look the same, but we are informed that it has different specifications.

My apologies we could not be of further assistance on this occasion.

If you have any further questions, please do not hesitate to contact us.

Kind regards

PS:

Hi Again

I checked again and there is his other sensor, OOM109-LF2, which has the exact same connector on both sides (gas and data).

Specifications looks like the same or even better.

Can you confirm that it is equivalent?

I don't know if you have this one in stock.

Kind regards.

Un saludo.

Miguel Ángel.

Hi

Thank you for your fast reply.

Can you show me a picture of a screw thread, as I don't know how it looks and a Google search didn't help.

I can handle a converter from Jack to Molex but I have to ensure that the gas connection will do the trick.

The sticker of my expired sensor says it's manufactured by Honeywell. There must be anything that can work.

Thank you.

Un saludo.

Miguel Ángel.

Good afternoon,

Thank you for your email.

The OOM111 sensor has a jack plug connector on the top and a screw thread on the opposite end.

Unfortunately, our cross-reference system indicates that we do not have an equivalent sensor for the CPET Oxygen Sensor II (318415). It may be that this is a custom-designed OEM sensor.

Kind regards

Subject: Envitec

To: <info@viamed.co.uk>, <enquiries@viamed.co.uk>, <technical@viamed.co.uk>

Hello,

I am very interested in acquiring an Envitec OOM111 oxygen sensor.

My cardio-pulmonary exercise testing (CPET) equipment uses a Geratherm sensor with reference 318415, but I understand that it is the same device with re-branding, albeit with minor differences. Please correct me if I am wrong. One of the differences is that the Envitec has a 3.5 mm jack type data connection, while the Geratherm has a Molex type connection. This would not be a problem because I can use a converter for the connection.

The main question I have regarding the Envitec is to confirm whether the other part—the gas connection—is indeed the same, as I have not seen photos of this end on the website.

I am attaching several photos of what the Geratherm gas connection looks like. I would appreciate it if you could send me a photo of the gas side of the Envitec device.

Thank you very much and best regards.
