Thank you for your reply.

As we have a lot of these sensors in stock, we would usually need to sell these before we order any more. The February date (4 months old) is usually accepted by customers.

The expected sensor life of galvanic oxygen sensors is either specified in months or % oxygen hours, based on standard conditions (typically: 1013 mbar, 25C dry ambient air).

Output is proportional to change in oxygen partial pressure and increased temperatures will also accelerate sensor electrochemical reaction, reducing the total life.

If a sensor is specified as having a life > 500,000 % oxygen hours, then in air this would equate to 33 months.

Examples of approximate oxygen sensor life:

In 30% oxygen = 23 months
In 50 % oxygen = 14 months
In 100 % oxygen = 7 months

Kind regards

Good morning,

Thank you for your email.

The R-23v sensors (part number 0110023) we have in stock are dated February 2026.

I will issue a proforma invoice. Are the addresses as follows:

Delivery Address

Mjdi W M Jaber
Aramex UK SNS TIP 184264
Unit 9 Skyport Drive
West Drayton
Harmondsworth
UB7 0LB

Invoice Address

Sabeel Alyoser Medical
182-21 150th Avenue
TIP 184264
Springfield Gardens
New York
11413
United States

Many thanks.

Kind regards
