To : PETER (Peter Anderson) <GoldMine User>

Hello Peter

We have just completed a quantity through our SM department and a few issues were brought up which I would like to see removed for any future builds if possible. A number of the components on the board require 0603 footprints, however the pads present are for what appears to be 0402 components, would it be possible to change these? Also there other components with unmatching pads for the footprints they have. Please see attached photo.

I would also like to add a fiducial mark to each circuit to improve the accuracy of placement, is it possible to do changes to the PCB? if so would you undertake this or could we?

Best regards

Andrew Wishart
