Special	No		

Flow chart includes: **Yes** or No

Classified by:

Date:/...../.....

The Device does no administer or exchange energy, fluids ,solids or gases. It is there as a guide to time elapsed so that APGAR scoring can be used.

APGAR scores are used at 1 minute: 5 minute: and 10 minute intervals from the birth of the infant.

This device is a simple second and minute counter that is started around birth and gives an audio sound to remind the clinician or midwife to check the time .

Real time of birth is noted by other means.
