

Work Instructions & Test Methods.

- Using the Order / Picking List sheet, parts are collected, and booked out, from stock.
 - The product is modified as per the quantity required on the order.
 - The fully modified unit should now be checked and tested (see the relevant operating procedure).
 - The unit should now have a visual Quality Assurance / Control check performed, to ensure that all labels are in position and that the unit is to the same requirements as stated in the operating procedure.
 - The completed unit, with a clean copy of the work sheet should now be presented to the Q.A. department for assessment.
-
