Sarah

Please process the order from Jan (800 sensors).

Thanks Jan

I had already planned another two batches of 400, your additional orders firms up the situation.

I hope to start shipping sensors during week 31.

Morning Steve.

Okay thanks for info,

In this case I will need to order another 800 sensors so total order is now 1517 this no can go up depending on how long it will take to for fill the order.

Pleas send sensors to us in the 100 batchs that you are mentening from week 31, does this mean we will receive 100 sensors in week 31 or will it actually be week 32 before we see them

From there at least 100 ewery week until the order is delivered.

Thanks.

Kind regards

Jan Petersen

Hi Jan

Remarkably the demand for medical oxygen sensors has not subsided yet and instructions are still to make these the priority. However, there is some light at the end of the tunnel and we are going to start trying to supply sensors in initially small quantities; then hopefully as the pandemic situation stabilizes, we can increase the quantities of rebreather oxygen sensors.

So, as of week 31 we should hopefully be able to start shipping sensors, albeit in small quantities. I am aware that you need the following to fulfil your back orders, but I propose that we start producing say 100 sensors per week.

VST Ref.	JJ-CCR ref.	Qty
CST123555	N/A	217
CST123556	N/A	500

Can I assume that you still require the sensors and do you want us to ship to you in these smaller batches or should we deliver full orders only?

Over the coming weeks we will try and firm up schedules and increase quantities. During these challenging times we cannot offer any guarantees, all we can endeavour to do is support you with the supply of sensors.

Regards

Steve
