Hi Zoe,

Sorry, we want the Viamed R-22AVG. I assumed Pete had copied you into the reply, see below.

Kind Regards

Hi Ryan,

Viamed R-22AVG – it has a better tolerance. See attached file from March last year

Regards

Pete

What was the voltages seen on the O2 cells Pete ?

I discussed with Opus yesterday.

They are going to extend the upper limit for me in some test software so we can try.

This should be a little more tolerant of variations.

Dennis

Steve

We have now tested the 10 x R-22AVG and found them to have a better range for our application

We will take those for the 48 replacements and I will change the part number going forward do you want us to quote R-22AVG or 0110182 from your delivery note?

Also is the price any cheaper we still be ordering in 100 min and I thought from our conversation some time ago there was a possible reduction

Hi Rowland,

Please can you return them to me using returns authorisation ref SRS66967 and we will replace them for you.

Looking at that batch that you purchased in November, I can see from the QA data that there is a wide spread of outputs, most are mid-range but quite a number of sensors were edging to which is within the QA limit of 13.0 mV but it appears that they have drifted high since QA This was one of our motivating factors when developing the Viamed R-22AVG; to keep that output with a tighter spec and minimal drift.

I know that you have not yet received the 10-off R-22AVG that you ordered, they are due to land with us this week, so depending upon how you are doing for stock, there appears to be 3 options:

- 1) if you need some now, we can replace these 48 with the same Teledyne R-22AV (I would request cherry-picked sensors with the lowest outputs if we go with this)
- 2) replace them with 48x R-22AV, expected end of week/early next week
- 3) put the replacements on hold until you have had a chance to get the 10x R-22AVG into service so that you can make an informed decision and replace them at a later date.

I do apologise for the inconvenience and will work to sort these out for you as smoothly as possible, please could you let me know your thoughts on how you would like to proceed?

Regards,

Steve
