

EyeMax2™

Phototherapy Eye Masks

the soft, safe and secure solution for eye protection during neonatal phototherapy

- Adjustable band for optimum comfort and a secure fit
- Easy to use design
- Ergonomically designed eye protection pad to reduce pressure and increase light protection

The EyeMax2 has been designed to assure optimum comfort and eye protection for neonates during phototherapy treatment. The single-piece, wrap-around design is secured at two points on either side of the neonate's head and can be independently adjusted to prevent unwanted movement and allows a comfortable and secure fit.

The large eye protection pad has been ergonomically designed to reduce pressure and increase light protection. The headband however allows blue light to penetrate, so that the head continues to receive phototherapy treatment.

Specifications & Part Numbers

Other phototherapy products available from Viamed

An alternative to the traditional phototherapy eye mask is the phototherapy light shield. These light shields are manufactured by Viamed using Amber 300™ material, and are available in a variety of standard designs and sizes. Light shields can also be designed to meet exact specifications, should the standard range not meet individual requirements.
