

Self-Tapping Screws

Ranges of slotted and Supadriv[®] panhead and countersunk, gimlet pointed self-tapping screws (type AB). Manufactured from hardened steel, zinc plated and passivated. Self tapping screws offer the advantages of fast, easy and vibration resistant assembly by creating their own mating threads as they are being applied, thus eliminating the requirement for tapping operations or holding nuts. Suitable for use in light and heavy sheet metal, soft plastics, plywood and composite boards, zinc and aluminium die castings. The Supadriv[®] types are particularly suited to fast production techniques, i.e. power drivers.
