

Product Description: **“TEE” Adapter**

Risk Analysis Report.

This product is based on a range of similar products designed by “Instrumentation Industries Inc.” in the early 1970’s, and has been continually improved in line with medical practices.

TEE Adapters are plastic connectors formed to allow for connections to various size tubes and monitors, it is a means of allowing the gases to flow where the clinician requires them to go usually to allow for gases to be directed, exchanged between a patient and a monitor.

These adapters can be, re-usable, disposable and / or Non-re-breathable.
