

Product Description: **Heatshields****Risk Analysis Report.**

Heatshields are small folded open or semi enclosed enclosures usually used to surround a neonate to prevent heat and water loss. They are manufactured from transparent Acrylic .

Several “Standard sizes” are available for neonate, infant & paediatric patients.

They can be semi closed usually with an access for the feet

Specials are manufactured to the user specification; all follow the basic description. The main requirements for change being, size and position of the access holes and flaps.

User Recommendations.

1. When used with neonates, the heatshields hood should be pre-warmed to prevent cooling of the infant from radiant loss to the Acrylic.

WARNINGS

The main hazards with this product are associated with cleaning and cracks that can harbour bacteria.
