

Product Description: **Ventilator Tube Holder**

Risk Analysis Report.

This product is based on a range of similar products designed by hospitals in the early 1960's, and has been continually improved in line with medical practices.

Ventilator Tube Holders are clear flat acrylic sheets, bent at right angles in the middle, usually used to hold IV and Ventilator Tubes.

It can be used to support these tubes etc, when babies are in incubators, or additionally it can be used when babies are under overhead heaters.

The Tube Holder is a means of maintaining an open working environment for the clinicians, thus not being hampered by overlaying and intrusive tubes when treating babies.
