Hi,

I have replaced the cell in the Analox O2Eii analyser with the new cell but I am getting a zero reading.

I have already replaced the battery and with the old cell I was getting a reading but could not get it to stabilise.

I am not sure if there is a broken wire on the new cell or not (see photo attached). How can I check if the new cell is faulty or if the issue is with the analyser. (The previous cell is approximately 2 years old, I believe, which is not as long a life as the original one that lasted about 5 years).

Please advise.

regards

Andrew
