Steve,

It is not a silly question actually. The DFBs are dependent on the gas inlet pressure.

So just like with the MB2, there is only one version that is suitable for your 60 PSI in Europe.

It is p/n R219P77-400 and it is \$139.

And just like the MB2 you purchased, it indicates both 0-15 and 0-5 LPM, which is the most popular increments that should satisfy the vast majority of blender applications in the NICU.

Yes the elbow can be fitted either way around on all microblenders.

Thanks.

Hi Bob

Can you please let me know the pricing of DFB range.

Silly question: are they suitable for use on any blender irrespective of gas input pressure?

Can the 90 degree elbow connection be fitted either way around, i.e. for left or right handed connection.
