2520000 requires Cleaning! Cable Intermittent Open Circuit further Issue 4410520 - Capnograph VM-2500-S dirty battery contacts, no cap required

**15 Nov 2019 Derek Lamb**

Created Related Issue #158771

Added by Derek Lamb sent to Michael Green

You have tagged a microstim repairs, the leads as open circuit. I thought the 2 leads were separate. how is the cable open circuit? as its a new repair code i need to determine if there is a patient risk with the fault. SRN32035 for reference

**15 Nov 2019 Derek Lamb**

Created Related Issue #158772

Added by Derek Lamb sent to Michael Green

You have tagged a microstim repairs, the leads as open circuit. I thought the 2 leads were separate. how is the cable open circuit? as its a new repair code i need to determine if there is a patient risk with the fault. SRN32035 for reference

**08 Sep 2020 Steve Nixon**

The cables are effectively separate, but run parallel to each other for the majority of the cable length. Either of them could be open circuit. It is very unlikely that they would be short circuited to each other. Does not pose a direct patient risk as there will be a lack of audio and no LED illumination, if the current isn't flowing. This will be observed by the user.

#### 05 Apr 2019 Derek Lamb

Created Related Issue #141942

Added by Derek Lamb sent to Steve Nixon

INFORMATION ONLY ISSUE **DO NOT** ADD NOTES!

Just done my weekly clear repairs codes issue, have you been speaking to phil / mg got an influx of linearity errors across different sensors. Im guessing they are new repair types due to you updating phil and mg about what to put in as a repair code, rather than a sudden influx of non linearity errors

#### 05 Apr 2019 Derek Lamb

normal sensor type failures, failure to be returned to suppliers no need to CAP at this time

#### 29 Mar 2019 Derek Lamb

0014995 - Disposable SpO2 Sensors - Infant. No fault found  
0110432 - Oxygen sensor MAX-250(B) New Stock returned  
2810046 - MD300-C15D - Green Finger Pulse Oximeter unit dead, 1st out of 600\_ units. no cap required at this stage.  
8010050 - Oxygen Sensor - JFD (non-mag). VST, High magnetic

signature. this is something we can not test, or control due to the extreme limits of the mag test. Components are first sent to JFD for test, then returned to be built. whats happens from then on is at best described as black magic. failures are common place for the application they are to be used across all equipment. seems it may come down to a yield rate of products that passes No cap required
