

TOF 3D Neuromuscular Transmission Monitor

- Reliable
- Easy to use
- Twitch response measured by accelerometer
- Displayed values
- Downloadable trend data

Quantitatively monitors the level of neuromuscular transmission during surgery or in the intensive care unit, as a means of assessing the depth or degree of muscle relaxation

By means of 3 dimensional acceleromyography the TOF 3D quantitatively monitors the level of neuromuscular transmission during surgery or in the intensive care unit.

The new TOF 3D is easy to use and in addition to the standard TOF and PTC modes, there are alternative objective and subjective modes of stimulation available.

The monitor's functions and modes of stimulation can be quickly customised to meet your specific requirements.

TOF 3D Neuromuscular Transmission Monitor

Mode of Stimulation:

Train of Four (TOF) Single stimulation or continuously every 15 seconds	✓
Post Tetanic Count (PTC)	✓
Train of Four (TOFs) Stimulation interval between 1 minute to 60 minutes	✓
Continuous 1 Hz or 0.1 Hz (Single Twitch) Single stimulation or continuous	✓
Double Burst Stimulation (D.B.S.) Ratio 3-2 or 3-3	✓
Tectanic (TET) 50 Hz or 100 Hz	✓

Display:	4.4" LCD display
Waveform:	Monophasic Rectangular Wave
Battery: > 1500 hours continuous operation	4 x AA batteries
Weight:	390g excluding batteries
Dimensions (H x W x D):	198 x 141 x 65 mm
IP Rating:	IPX3
Data Storage in Device:	Yes
Memory Capacity:	45,000 records (i.e. 180 hours of TOF recording)
Twitch Monitoring Methods:	Hand, thumb and eye adapters available
Mounting Options:	Pole Mounts available

Includes standard accessories:

2510102

Main Patient Cable
REF: 5750108

2510103

Stimulation Cable with pinch clamps
REF: 5750107

2510104

Acceleration (AMG) Transducer
REF: 5750105
