

Vish-2 Neo SMARTest
High Performance Pulse Oximeter

SMARTest technology has extremely low power consumption requirements, and is a real alternative for OEM customers who require high-end pulse oximetry solutions for their applications.

Hand model with pulse oximeter attached to the index finger.

VM-3160 Pulse Oximeter

VM-3160 is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

Hand model with pulse oximeter attached to the index finger.

SMARTest Modules
High Performance SpO₂ Technology for OEMs

SMARTest module

SMARTest technology has extremely low power consumption requirements, and is a real alternative for OEM customers who require high-end pulse oximetry solutions for their applications.

SMARTest II

SMARTest II technology has extremely low power consumption requirements, and is a real alternative for OEM customers who require high-end pulse oximetry solutions for their applications.

Hand-Oxygen Analyzer

This analyzer is used for monitoring oxygen saturation in the hand. It is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

MiniO2 ME
Oxygen Monitor

The MiniO2 ME is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

MiniO2 ME
Oxygen Monitor

The MiniO2 ME is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

MySigna
Oxygen Monitor

MySigna is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

NEW and Continually Expanding Range of Lead-free Oxygen Sensors

ROHS COMPLIANT

SpiraTrac
Flow Sensor Array

SpiraTrac is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

SpiraTrac
Flow Sensor Array

SpiraTrac is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

EyeMax2
Phototherapy Eye Mask

The EyeMax2 is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

NeoMask
Phototherapy Eye Mask

The NeoMask is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

400-ARC
Autoclavable Temperature Probes

The 400-ARC is a non-invasive, non-painful, and non-intrusive device for continuous and real-time monitoring of SpO₂ and pulse rate. It is designed for use in critical care, emergency, and home care settings. The device is compact, lightweight, and easy to use. It features a large, high-contrast LCD display and a built-in printer for data recording.

versastream sampling lines
for use with a range of manufacturers' capnographs

Short Term Monitoring: 1-24 hours
Long Term Monitoring: 24-72 hours

Neonatal/Infant: Neonatal/Infant compatible
Pediatric: Pediatric compatible
Adult: Adult compatible

Nasal Sampling Line for range and emergency services applications
Nasal Sampling Cannula with O₂ Delivery
Nasal/Oral Sampling Cannula with O₂ Delivery

Sampling Lines

Various sampling lines and connectors for use with capnographs.
