TOF 3D Neuromuscular Transmission Monitor

Quantitatively monitors the level of neuromuscular transmission during surgery or in the intensive care unit, as a means of assessing the depth or degree of muscle relaxation

- Reliable
- Easy to use
- Economical, uses standard low cost ECG electrodes
- Twitch response measured by accelerometer
- Displayed values
- Downloadable trend data

TOF 3D Neuromuscular
Transmission Monitor
REF: 2510091

By means of 3 dimensional acceleromyography, the TOF 3D quantitatively monitors the level of neuromuscular transmission during surgery or in the intensive care unit.

The new TOF 3D is easy to use and, in addition to the standard TOF and PTC modes, there are alternative objective and subjective modes of stimulation available.

The monitor's functions and modes of stimulation can be quickly customised to meet your specific requirements.

Accessories marked with a dotted border are NOT included as standard. Specifications subject to change
