

VERSASTREAM GAS SAMPLING LINES

Compatible for use with Capnographs and patient monitors with **Oridion** (Covidien, Nellcor, Medtronic, Philips, Masimo, Mindray, Zoll, Nihon Kohden...) technology.

ORIDION

LOCATION

Ideal for use in Hospitals and Emergency Care including Ambulances, Accident and Emergency, Intensive Care Unit...

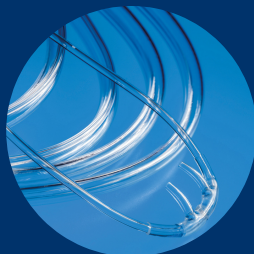

APPLICATION

Available for Short Term (< 24 hours) use and Long Term (< 72 hours) applications

ABOUT US!

Viamed are pleased to introduce VersaStream gas sampling lines as an innovative solution for sidestream gas monitoring with increased performance and low cost. These lines are compatible to the FilterLine® range of sampling lines and for use with Microstream® enabled capnograph and patient monitors.

VersaStream gas sampling lines use the latest material technologies to allow the removal of moisture and water – even in cases of low temperatures and high humidity. They are very flexible and are suitable for both short-term and long-term applications.

BENEFITS

- **One-piece sampling line solution**
- **Integrated bacteria filter and water removal** reduces the number of patient circuit parts and speeds up patient monitoring preparation time
- **Reliable measured gas values**, due to negligible dead space volume of the filter – even in cases of high respiration rates
