Together with the **Nomo technology**, that removes water from the sampled gas, the **ISA™ CO<sub>2</sub> Analyser** delivers the highest performance in an ultra compact format.

The **Nomo Adapter** incorporates a unique water separation made of a special polymer, with an integrated hydrophobic bacterial filter. The Nomo Adapter passes water vapour and condensed water through its membrane like surface and evaporates into the surrounding air, while leaving the carbon dioxide concentration unaffected.

The Nomo technology allows for up to two weeks of continuous monitoring with high moisture containing breathing gases - **a first for capnography**.

The Nomo Adapter contains a hydrophobic bacterial filter (> 99.9980%) to protect the **ISA™ CO<sub>2</sub> Analyser** from water intrusion and cross contamination.

## Screen Display Options

## Powerful Capnograph PC Software

With the convenient Capnograph PC Software all measured values, selected alarm limits and alarm messages can be transferred to the computer via the USB interface. The data can be viewed on the computer and patient information added. The PC software enables basic statistical evaluation of the stored data.

The software can also be used to display and store the measurement values and alarm messages on the computer in parallel to ongoing measurements. This function is activated by setting the real-time mode of the Capnograph. When this mode is activated, the device transfers the actual measurement values for  $\text{etCO}_2$ ,  $\text{FiCO}_2$ ,  $\text{SpO}_2$ , Respiration and Pulse Rate measurement values every second to the computer via the USB interface.
