November 2012

Dear Mrs Hollings,

Oxygen Hoods and Phototherapy Light Shields

Designed for use with neonatal patients - for the short-term, stable delivery of oxygen

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to babies who require it; maintaining stable FiO_2 around the baby's head, whilst leaving the body accessible for care. Viamed manufacture a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet – we can manufacture oxygen hoods to specific requirements.

The leaflet also illustrates our range of phototherapy light shields, which are an alternative to traditional eye masks. Besides blocking ultraviolet and blue light in the range of 300 – 500nm, the light shields can be used in conjunction with our standard oxygen hoods. Alternatively we offer phototherapy oxygen hoods for use on their own.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Steve Hardaker
UK Sales Manager
