

Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients, for the short-term, stable delivery of oxygen

These Oxygen Hoods consist of flat sheets of transparent vinyl with built-in support frames and a drape neck opening.

- See-through environment provides full patient visibility.
- Drape neck opening provides easy access to the patient.
- Single patient use means reduced risk of cross-infection.
- Flat packed for easy storage and transportation.

Standard Hood

The standard Oxygen Hood has two 22mm inlet ports, a full vinyl bottom, a drape neck opening and is available in a variety of sizes.

Other variants include:

- Partial bottom - remains stable whilst reducing heat build-up under the hood
- No-bottom - provides easier access to the patient

NICU

The NICU single patient use hoods are bottomless with a 75mm x 125mm draped access port on the rear panel, plus a drape to the front. Offers maximum patient access for free flow (blow-by) procedures or adjustments.

Double Oxygen Tent Set

The Double Tent Set is a combination of the Standard Hood with a specially designed outer tent with four 22mm ports for vacuum and aerosol tubing. Excess aerosolized medications are vacuumed from the space between the tents. The aerosol port of the inner tent is matched with the outer tent.

Low Birth Weight Oxygen Hood

For full-body oxygen/aerosol treatments, Low Birth Weight Oxygen Hoods are available in two sizes. These hoods can also be used in high-humidity/mist procedures. A variety of access port options include top access, front drape and rear access port. Low Birth Weight Oxygen Hoods are ideal for neonates on warming tables.
