November 2012

Dear Sister Farrell,

Single Patient Use Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to babies who require it; maintaining stable FiO_2 around the baby's head, whilst leaving the body accessible for care. In addition to our range of reusable oxygen hoods Viamed provide a range of single patient use oxygen hoods, available in several formats and sizes - as detailed in the enclosed leaflet. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk**, if you have any queries or require further information.

Yours sincerely
