Dear Ms Newton,

Infant Resuscitation Cabinet

Providing essential equipment for safe and easy infant resuscitation in a compact and discreet cabinet.

I am writing to you as our records show that your hospital has in the past purchased a Viamed wall-mounted infant resuscitation cabinet system. We hope that you have been satisfied with this product and would like to bring to your attention a couple of upgrades available for the cabinet:

Air/Oxygen Blender

The ability to provide mixed air and oxygen in a safe, easy and controlled manner in the critical care environment is becoming increasingly important. The blender can be mounted within the cabinet offering a simple, reliable and accurate method of delivering mixed gas to the patient.

Extended medirails are available to allow the mounting of an air/oxygen blender within the resuscitation cabinet; please contact Viamed for a detailed quotation*.

Digital Apgar Timer

With audible indicators at 1, 5 and 10 minutes.

Available separately.

Part Number: **0310100**

Price: **£195.00**

* Modification of the Tom Thumb is required to accept gas from the blender. Viamed offer a service visit option or we can supply all parts required for work to be completed by the hospital.

I enclose the Infant Resuscitation Upgrades price list containing information on these upgrades as well as a copy of the blender leaflet, which I hope you find of interest. Should you require further information on any of these items, please do not hesitate to contact a member of our sales team.
