Hello Steve,

I think shape 1 looks best. Can you agree. We want to push the project forward.
With kind regards
Bernd

Hi William,.

We believe the optimal location and shape for this extra w arning LED is â shape 2â s. attached picture.

It looks good and it w ill be easy for implementation. If there is no place on the main pcb then this led can be mounted on an extra small pcb and fit on the housing (melted pins) from inside.

Best regards

Ned

Hello Ned,

How about this design?

Hi William,

Water proof is not a problem.

You should set design to have transparent part (slightly milky colour) as cover for this additional w arning LED. This part has to be from ABS material and w ill be glued to the Housing w ith solvent glue or UV glue.

Using the keypad back light w ill be not sufficient enough on daylight.

Best regards

Ned

Hello Ned,

You have suggested to have warning light on the front part of the housing.We have checked the housing,it is difficult to have warning light on the front part of the housing because of waterproof.We have to use a transparent part for warning light,but it is difficult to make this part waterproof.There is no enough space on the front part of the housing of this light.So we suggest to use the keypad light as warning light.

Hello Bernd,

There is no space for the shape 2.
Here is the design based on shape 1.

We only want to add one additonal alarm light, which is shape 1.

With kind regards
Bernd

Bernd

Why do we need the extra alarm indicator/s? Is it legislation, because the TFT is not as clear as OLED, or just to provide extra all around indication?

Are you planning to fit 3 warning lights (one on top and one either side) as per the drawings or just one on top?

If 3 lights â then I suggest shape 2 for the top.

If 1 light â then perhaps shape one is the better option.

Steve
