

Department Manager
Neonatal Unit (N3)
Alder Hey Children's Hospital
Eaton Road
Liverpool
L12 2AP

November 2014

Dear Sir or Madam,

Reusable and Single Patient Use Oxygen Hoods

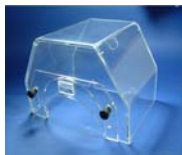

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

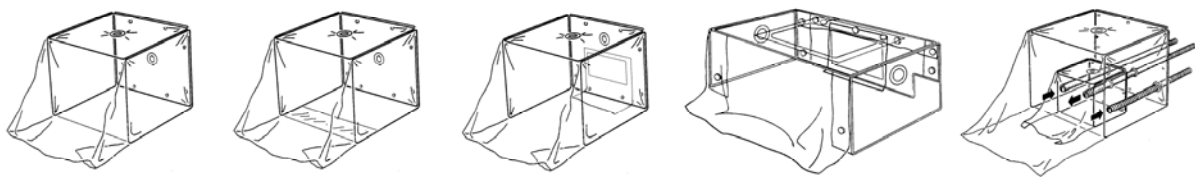

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

November 2014

Dear Sister Nicholson,

Reusable and Single Patient Use Oxygen Hoods

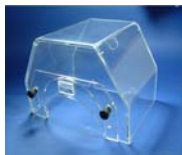

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

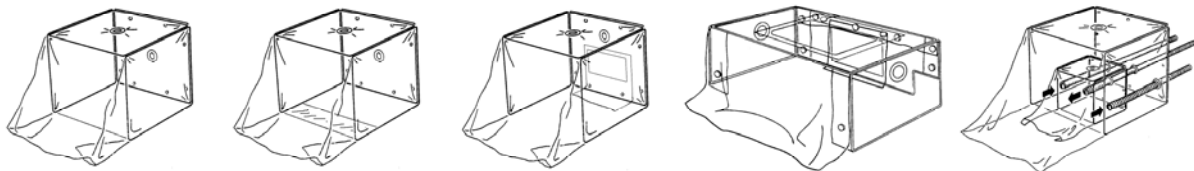

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

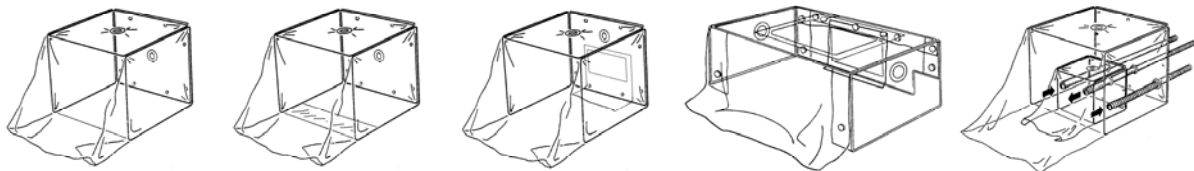

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

November 2014

Dear Sister Montgomery,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

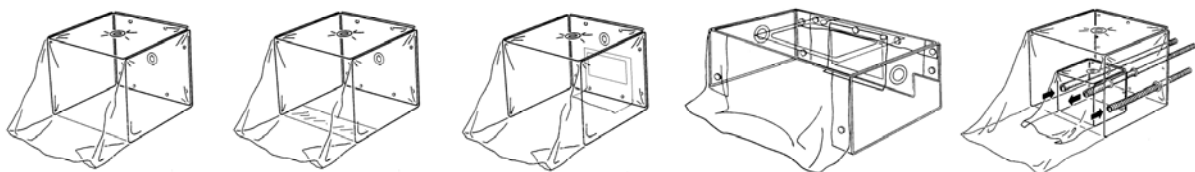

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

November 2014

Dear Mrs Francis,

Reusable and Single Patient Use Oxygen Hoods

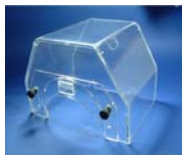

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

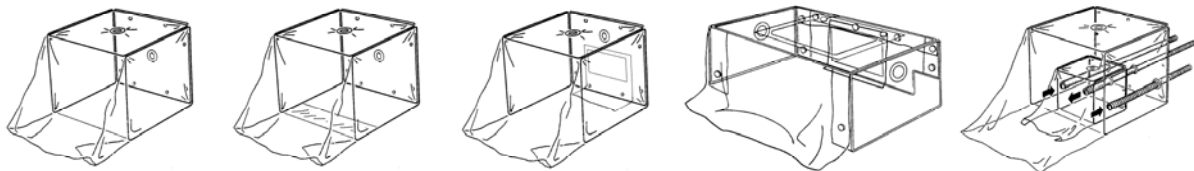

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

Dr S A Spencer
Consultant Paediatrician
Neonatal Intensive Care Unit
City General Hospital
Newcastle Road
Stoke-On-Trent
Staffordshire
ST4 6QG

November 2014

Dear Dr Spencer,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

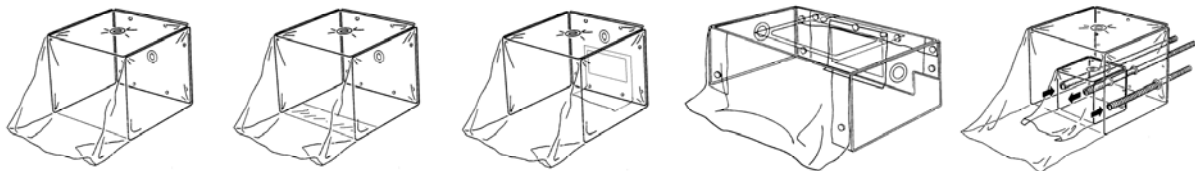

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

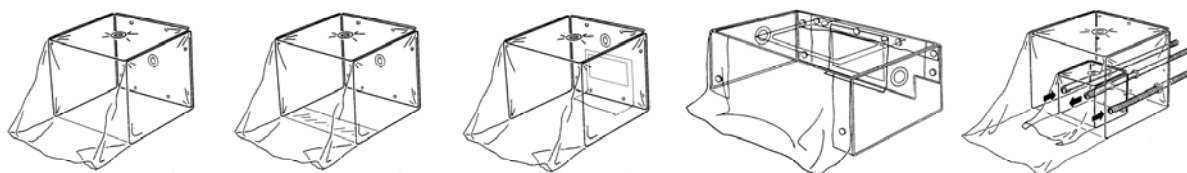

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

November 2014

Dear Sister Jackson,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

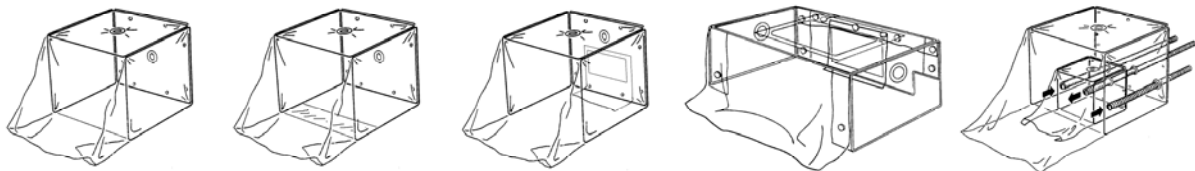

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

November 2014

Dear Dr Williams,

Reusable and Single Patient Use Oxygen Hoods

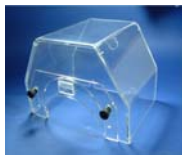

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

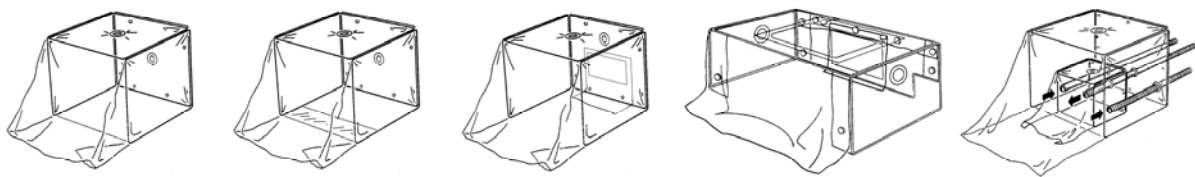

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

November 2014

Dear Ms Cochran,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

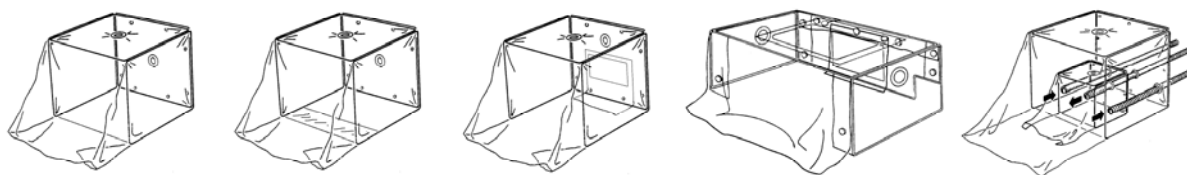

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

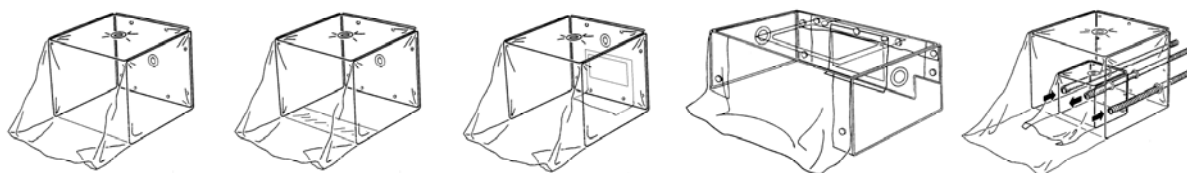

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

November 2014

Dear Ms Wray,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

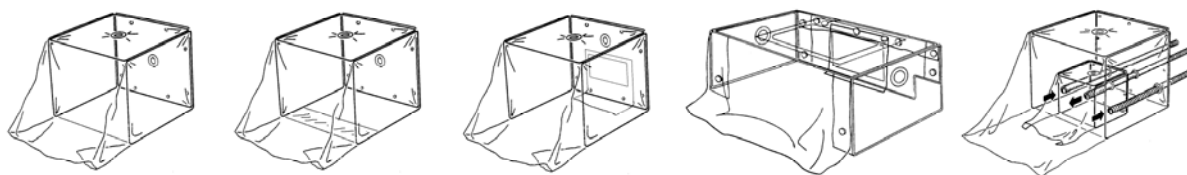

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

November 2014

Dear Mrs Smith,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

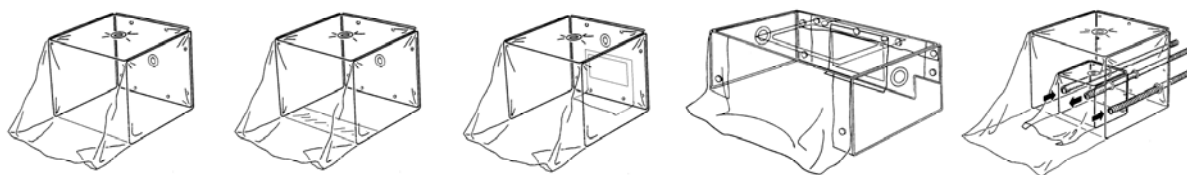

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

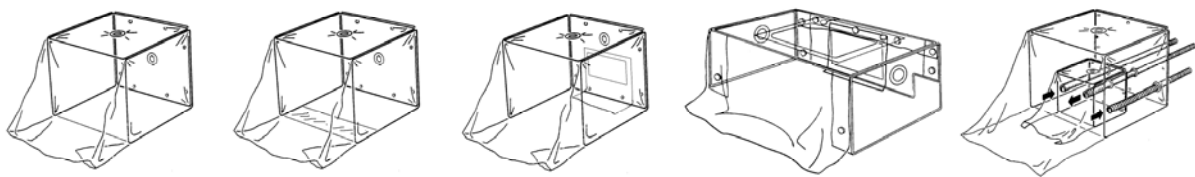

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

November 2014

Dear Sir or Madam,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

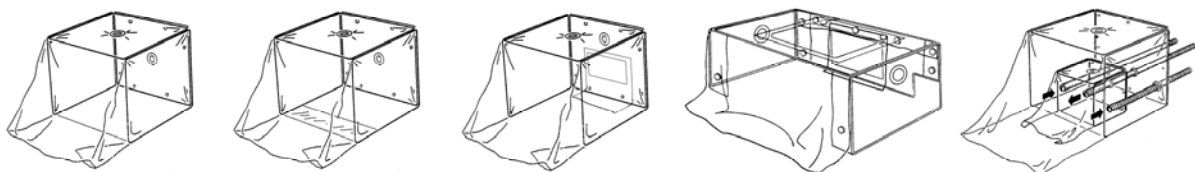

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

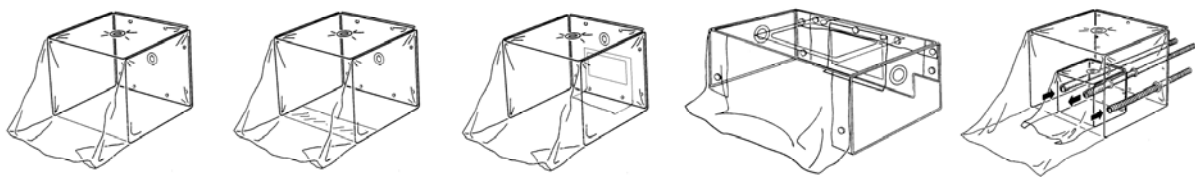

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

November 2014

Dear Mrs Sloman,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

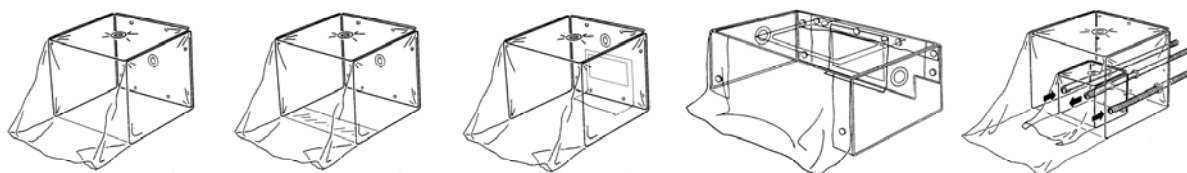

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

November 2014

Dear Sister Alexander,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

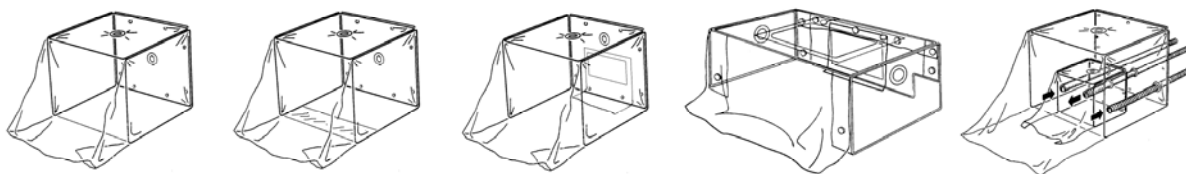

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

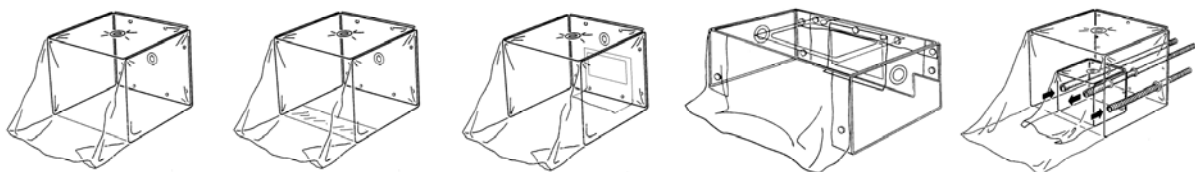

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

November 2014

Dear Dr Symon,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

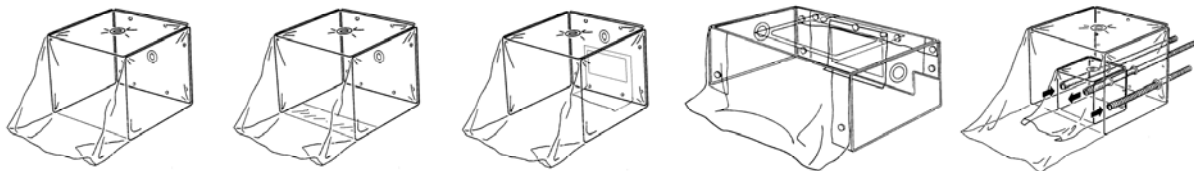

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

Middlesex
TW7 6AF

November 2014

Dear Sister Samuel,

Reusable and Single Patient Use Oxygen Hoods

Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen

Reusable Oxygen Hoods

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

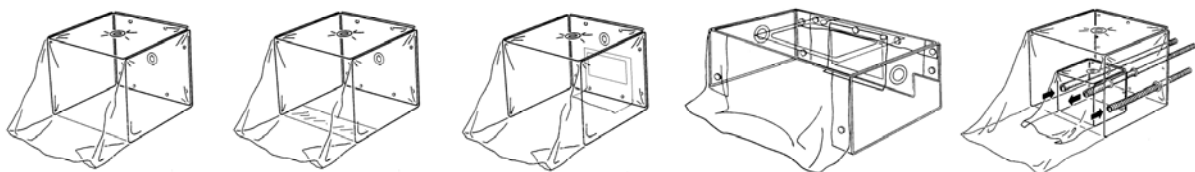

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable FiO_2 around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

Standard Hoods

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

Hood With Side Ports

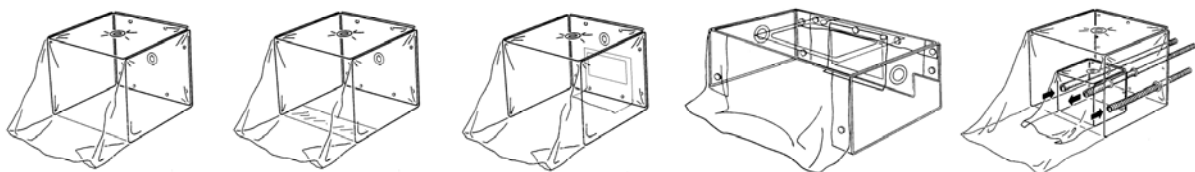

Side ports enable the user to have easier access to the patient.

Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.

Single Patient Use Oxygen Hoods

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin
