November 2014

Dear Sister McCall,

### **Reusable and Single Patient Use Oxygen Hoods**

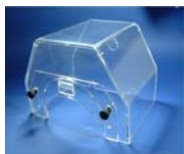

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

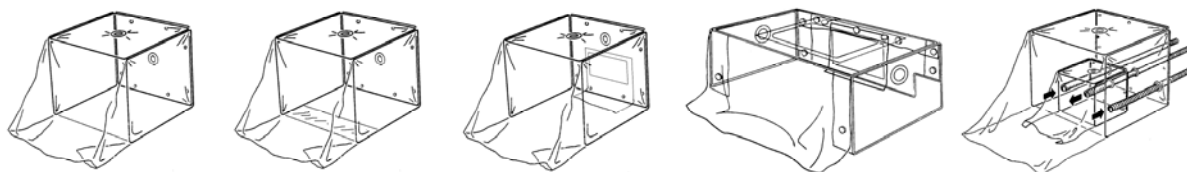

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

November 2014

Dear Ms Robinson,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

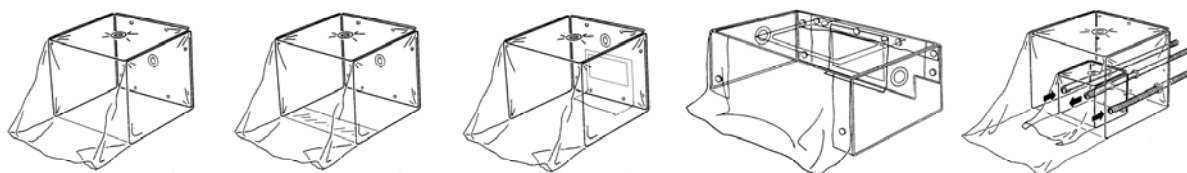

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

#### **Hood With Side Ports**

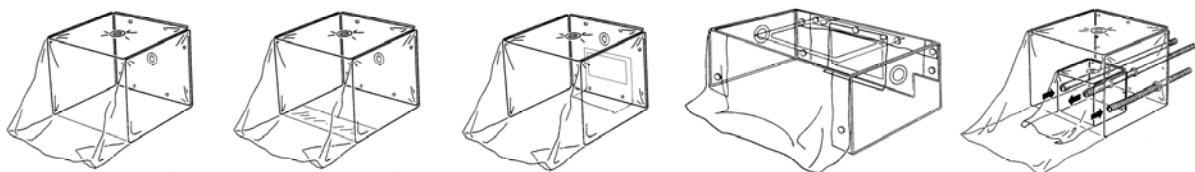

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

November 2014

Dear Ms Gibbs,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

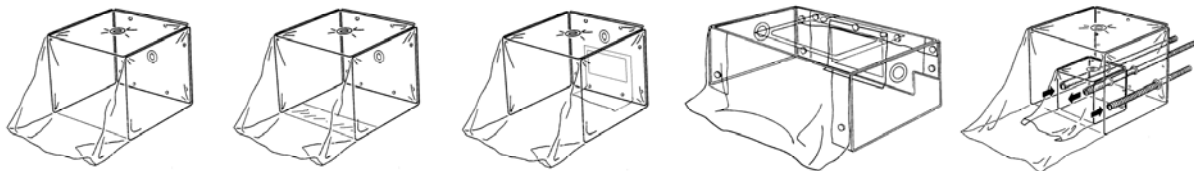

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

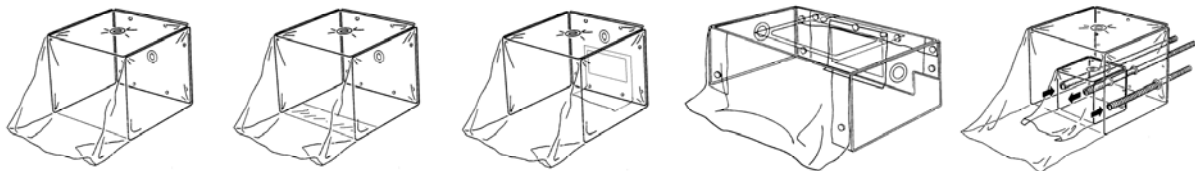

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

November 2014

Dear Dr Simpkins,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

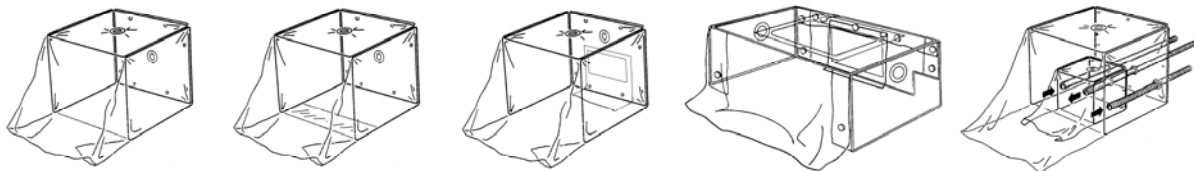

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

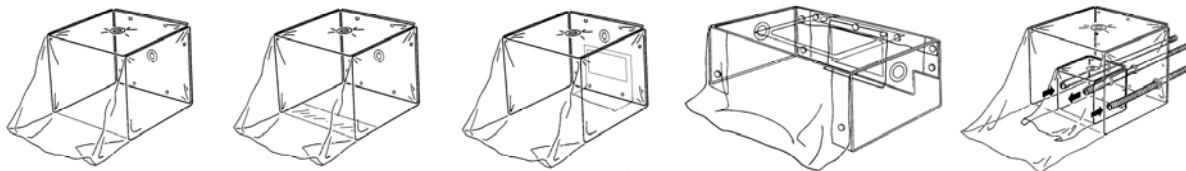

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

November 2014

Dear Dr Moganasundrum,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

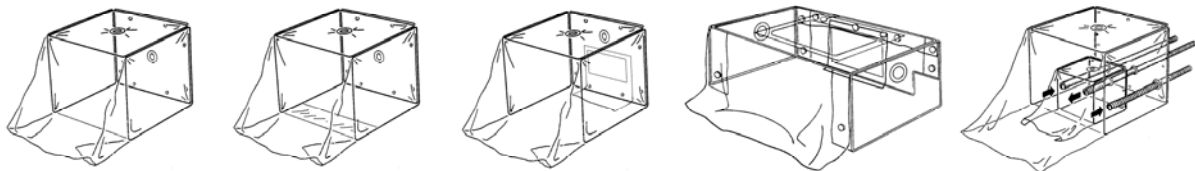

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

Lowestoft Road  
Gorleston  
Norfolk  
NR31 6LA

November 2014

Dear Ms Goodwin,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

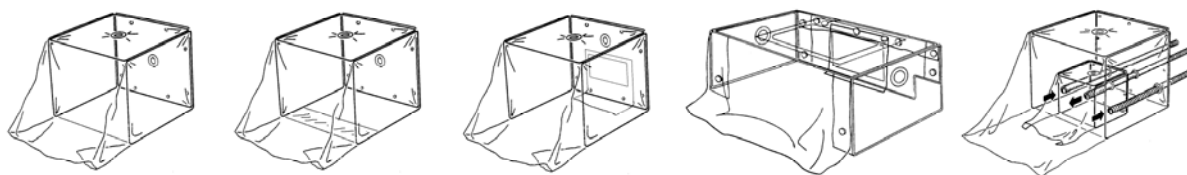

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

November 2014

Dear S R King,

### **Reusable and Single Patient Use Oxygen Hoods**

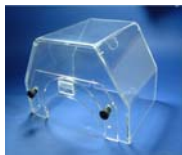

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

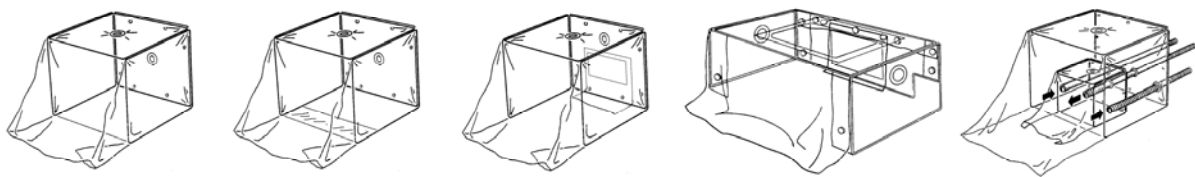

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

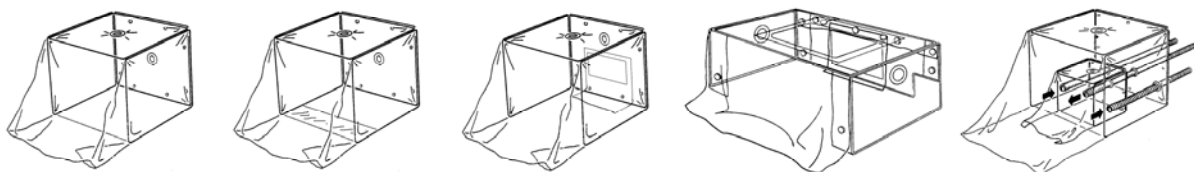

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

November 2014

Dear Ms Wood,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

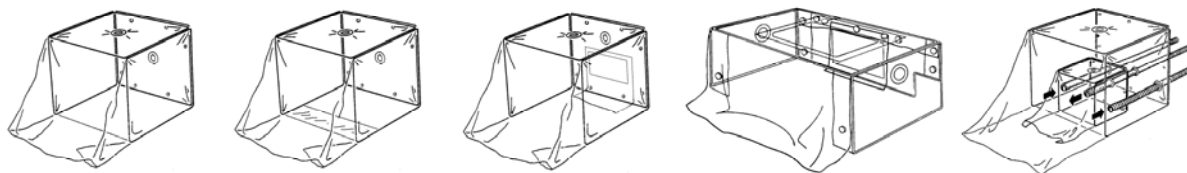

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

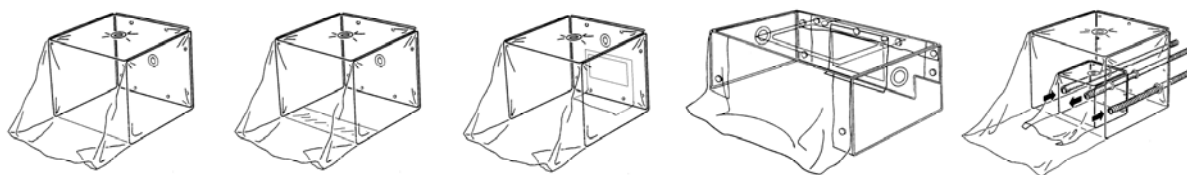

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Dear Mr Shore,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

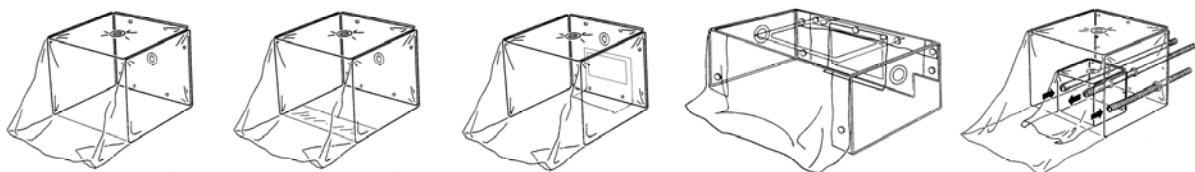

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

November 2014

Dear Mr Quinton,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

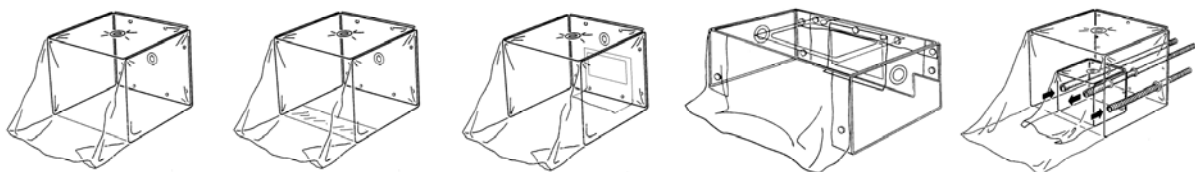

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Catrin

Paediatric Intensive Care Unit  
St Mary's Hospital  
Praed Street  
Paddington  
London  
W2 1NY

November 2014

Dear Dr De Munter,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

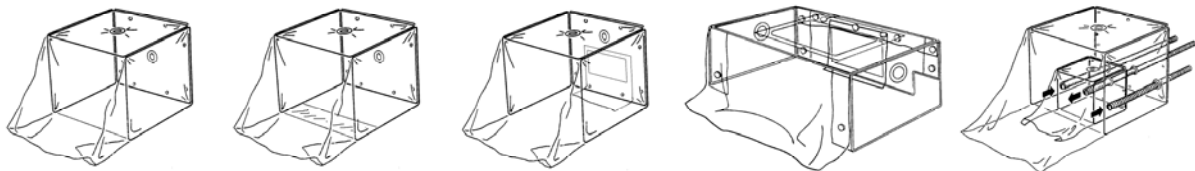

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.

Yours sincerely

Mr H C Grundy  
Paediatrics Department B5  
University Hospital Coventry  
Clifford Bridge Road  
Coventry  
West Midlands  
CV2 2DX

November 2014

Dear Mr Grundy,

### **Reusable and Single Patient Use Oxygen Hoods**

*Designed for use with neonatal and paediatric patients - for the short-term, stable delivery of oxygen*

#### **Reusable Oxygen Hoods**

An oxygen hood is probably the most common traditional short-term method of delivering extra oxygen to neonatal/paediatric patients that require it; maintaining stable  $\text{FiO}_2$  around the patient's head, whilst leaving the body accessible for care. These Perspex® reusable oxygen hoods feature a sliding front aperture.

#### **Standard Hoods**

This hood can be used in conjunction with Viamed's phototherapy light shields for use during phototherapy.

#### **Hood With Side Ports**

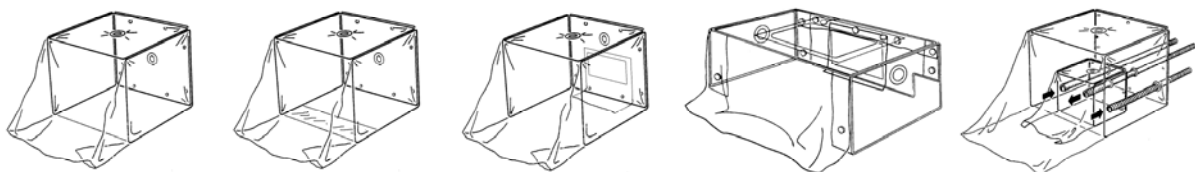

Side ports enable the user to have easier access to the patient.

*Viamed manufactures a range of oxygen hoods either with or without side ports, and in addition to the range detailed in the enclosed leaflet, we can manufacture oxygen hoods to your specific requirements.*

#### **Single Patient Use Oxygen Hoods**

In addition to our range of reusable oxygen hoods Viamed provides a range of single patient use oxygen hoods, available in several formats and sizes. These oxygen hoods are designed for single patient use, thereby reducing the risk of cross infection and are flat packed for easy storage and transportation.

Should the above be of interest, please do not hesitate to contact our sales team on **(01535) 634542** or email **info@viamed.co.uk** if you have any queries or require further information.
