February 2015

Dear Sir or Madam,

### **Introducing the VersaStream CO<sub>2</sub> Sampling Lines for use with Viamed VM-2500 Series Capnographs**

Viamed are excited to introduce the VersaStream CO<sub>2</sub> sampling lines as an innovative solution for sidestream CO<sub>2</sub> monitoring. Offering a one-piece sampling solution with increased performance and low cost. These can be used as an alternative option instead of the original Nomo adapter and Nomolines as the whole line is single-patient use and has an integral, compact filter.

Using the latest material technologies allows the complete removal of moisture and water - even in cases of low temperatures and high humidity. VersaStream® CO<sub>2</sub> sampling lines are very flexible and are suitable for short-term and long-term applications.

#### **Why VersaStream CO<sub>2</sub> sampling lines?**

- Cost-effective alternative to Nafion® tubes
- The gas-selective non-porous material facilitates fast and complete removal of condensation from the sampling line
- The integrated bacterial filter prevents contamination
- Reliable measured gas values, due to negligible dead space volume of the filter - even in cases of high respiration rates
- Integrated bacteria filter and water removal reduces the number of patient circuit parts and speeds up patient monitoring preparation time

Available in a number of variants including: single nasal sampling line, nasal cannula, nasal/oral cannula and a one piece airway adapter sampling line.

Please find enclosed a leaflet outlining the range along with a price list. Should you have any further questions regarding this, or would like to obtain samples for evaluation, please do not hesitate in contacting our sales team on (01535) 634542 between 9:00am and 5:30pm Monday - Friday.

Yours sincerely

Catrin Hollings
