Dear «UPOSITION»,

I would like to introduce Viamed's comprehensive oxygen monitoring products catalogue, which details the extensive range of analysing equipment and accessories available.

The range includes oxygen analysers and monitors to measure oxygen levels in a number of different situations and applications, for example in ventilator circuits, oxygen hoods/tents, incubators, anaesthesia machines and CPAP circuits. These products can also be used to test medical equipment and gas supply systems to verify that the correct level of oxygen is being supplied.

Ideal for use with oxygen hoods and tents during the bronchiolitis season, the MX300 oxygen monitor, featuring high and low user-adjustable alarms, accurately measures the amount of oxygen being supplied to a patient, which is vital as this can effectively determine the patient's recovery process.

I hope you find the enclosed of interest, should you have any further queries please do not hesitate in contacting a member of our team on (01535) 634542.

Yours sincerely

Catrin
