Dear Ms Harrison,

### **A simple approach to Carbon Monoxide Breath Testing**

As part of the NICE guidelines it is now mandatory that all pregnant women are CO breath tested at their first midwifery appointment.

Viamed are proud to announce the release of the CO Check range of Carbon Monoxide monitors into its portfolio.

The CO Check range includes two monitors:

- The **CO Check Pro Baby** has been designed to enable all healthcare professionals to carry out quick and simple breath tests that provide comprehensive results. A single breath from a pregnant woman will instantly display her results in PPM and %COHb along with the results of CO she has passed on to her unborn baby. This result is displayed as %FCOHb or Foetal Carboxyhaemoglobin. All measurements are backed up with an appropriate traffic light for visual effect.

The CO Check Pro Baby can be used by healthcare professionals for both home visits, to test ambient air, as well as breath testing.

- The **CO Check + Baby** has been designed as a low cost simple screening device. A single breath will instantly display CO levels in PPM, %COHb and %FCOHb on a large easy to read custom display.

The CO Check+ Baby comes complete with all accessories and is supplied in a soft shell carry case for easy transport. It is rapidly becoming the device of choice for all smoking cessation professionals helping pregnant women quit smoking.

Please find enclosed a leaflet detailing these products, should you wish to discuss this in further detail please do not hesitate in contacting a member of our team on 01535 634542 or email [sales@viamed.co.uk](mailto:sales@viamed.co.uk)

Yours sincerely

Catrin Hollings
