Hi Duncan

Further to the discussion yesterday, can you please get back to me regarding the following:

- 1) Output cap diameter dimension. The details submitted with the purchase order differed to what had been previously agreed.
- 2) Details for the sensors and labelling artwork. We can generate the artwork quickly, but the actual details are important.
- 3) Accuracy specification at 2.0 bar. As discussed the sensor output is linear and on your datasheet the step change is significant. We had already met the previously agreed specification, which was a an improvement (+/- 1.25%), the one included in with the purchase order was reduced again (+/- 2%).

Have the component parts been returned back to me?

Regards

--

Steve
