

Patient Monitoring with Bispectral Index™ EEG Sensors

As a dedicated and long-serving supplier of medical devices to the NHS, Viamed is committed to helping to lower NHS expenditure through the supply of cost-saving, high quality products.

Please allow me to highlight the series of disposable, single-use EEG sensors, a low-cost alternative compatible for use with existing BIS™ monitors. Designed to monitor and assess the depth of anaesthesia using the Bispectral Index (BIS)™ derived from EEG signals, this technology provides real-time insights into a patient's consciousness and electrical brain activity during surgical procedures.

Key Features of our BIS™ EEG Sensors:

- **Low Cost:** £9.36 per patient

- **Disposable Single-use Design:** Designed for up to 24 hours of continuous use. Disposable to minimise infection control concerns.
- **Compatibility:** Compatible with a wide range of BIS™ monitors and modules, facilitating easy integration into your existing monitoring system.
- **Clinically Tested Measurement Accuracy:** Clinical tested for high measurement accuracy, enabling precise and reliable depth of anaesthesia monitoring.
- **Soft and Biocompatible Material:** Manufactured from soft and bio-compatible materials, minimising discomfort and ensuring a positive patient experience during monitoring.
- **Latex-Free:** Latex-free to minimise risk to patients and healthcare professionals.

By incorporating these compatibles BIS™ EEG Sensors into your hospital's monitoring system, you can expect:

- Enhanced infection control through the use of disposable sensors
- Seamless integration with your existing BIS™ monitors and modules
- Reliable and precise monitoring of depth of anaesthesia
- Cost saving alternative to OEM sensors

Please find below link to our latest leaflet. For pricing or to request a sample for evaluation, please do not hesitate to contact our sales team at 01535 634542 between 8:30am and 5:30pm, Monday to Friday or email eeg-sensors@viamed.co.uk
