

Namelets ID Bracelets Insert Style

Child White. Box of 100 X 1
Product Code: 6040

Unit of Sale	1 Box
Case Qty	1 Box of 100
Case Dims. W x D x H (mm)	70 x 210 x 45
Case Weight (kg)	0.229
Case Barcode	05010058060401

Namelets patient identification bands provide an established method of secure and safe patient identification for any healthcare environment. Easy to use, Namelets are made from a high quality medical grade polymer that is free from natural rubber latex. This material is also soft and conformable with no sharp edges, minimising the risk of discomfort during wear.

The insert version features a card that can either be hand written or computer generated. This is inserted into a pocket that is sealed by the band to prevent water damage or tampering.

The band is fastened using strong plastic stud closures. Namelets are designed to prevent re-use or transfer between patients. If the band is stretched for removal it becomes visibly deformed, identifying that the patient has tried to remove it. This ensures that patients are identified correctly as it alerts staff to re-confirm all personal details if they see the band is stretched. For safety, bands will also break naturally if sufficient force is applied, to prevent injury to the patient if the band inadvertently becomes entangled. Bands should be cut with scissors when removal is required.

Strong plastic stud closure

Cannot be transferred or re-used
without being visually detected

Band breaks safely in extremis

Fastening studs are firmly secured
and cannot fall out

Soft, conformable medical grade
polymer for maximum comfort

No sharp edges to damage delicate
skin

Suitable for any patients
