

Korrvu®

Suspension Packaging and Retention Packaging

Redefining product protection - see for yourself

Sealed Air

Korrvu® Packaging

Korrvu® Suspension Packaging and Korrvu® Retention Packaging for the clear solutions to your packaging needs.

Innovative

Cost-effective. Easy to use. Korrvu® packaging designs are engineered to satisfy your specific packaging requirements with unique benefits that are plain to see.

Unparalleled product protection

Korrvu® packaging safely holds your product in the centre of the shipping container. These engineered packaging solutions keep your product securely in place, protecting it from shock and vibration.

Showcases your product

Korrvu® packaging's transparent film provides maximum visual appeal. Products can be inspected while still in their protective environments. Your package can serve as both a protective carton and an effective display merchandiser.

Versatile

Korrvu® packaging's resilient film will conform to a variety of shapes. Each design can be used for many similar but varying shapes, thereby reducing your packaging inventory.

Saves storage space

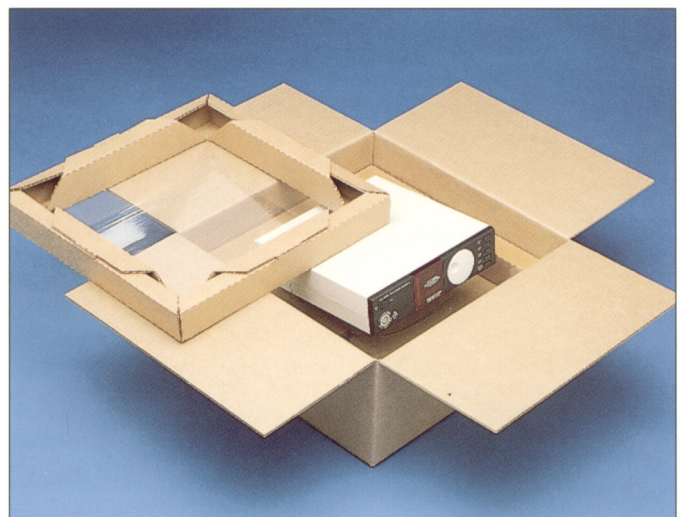

Korrvu® packaging stores flat, reducing storage requirements. Because Korrvu® packaging requires no equipment installation, no capital investment is required.

Environmentally sound

Korrvu® suspension packaging is an environmentally sound alternative that provides source reduction, uses recycled materials and is reusable and recyclable. Korrvu® packaging is RESY approved for recycling in Germany, and is reusable for return shipments.

Korrvu® packaging requires less storage space and uses a minimum of materials, reducing waste at the source. In this case, Korrvu® packaging reduced the volume of packaging materials used by over 75% while maintaining the same level of protection as the previous packaging.

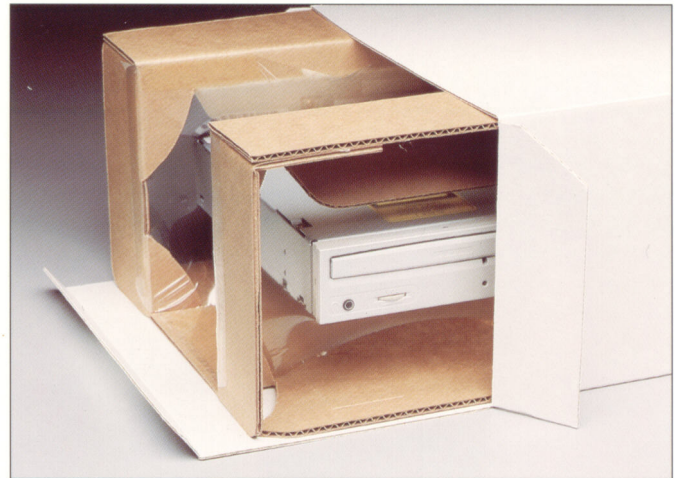

Korrvu® Suspension Packaging

High-performance protection anyone can see

Korrvu® suspension packaging provides valuable or fragile products with unparalleled product protection throughout the shipping cycle - even after repeated drops. The tough and resilient suspension film retains its effectiveness for return shipments and multiple uses.

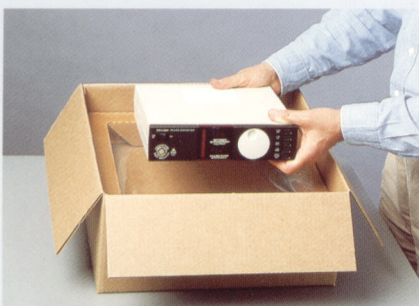

Korrvu® suspension packaging complements your product's appearance - combining outstanding cushioning protection and attractive presentation.

Korrvu® suspension packaging is excellent for fragile electronic components

Korrvu® suspension packaging is easy to use and simple to assemble. No extensive operator training is required.

At the packaging station, the frame is assembled and placed in the box to suspend the product in the centre of the container.

The top window is placed over the product, completely suspending the item between two strong, flexible, low-slip films.

The box is closed, creating tension that holds the product securely between the two suspension windows, protecting it from shock and vibration

Korrvu® Retention Packaging

The right solution for a wide range of applications

Korrvu® retention packaging provides excellent protection for semi-rugged products that need a limited degree of protection from shock during shipping, handling and transportation.

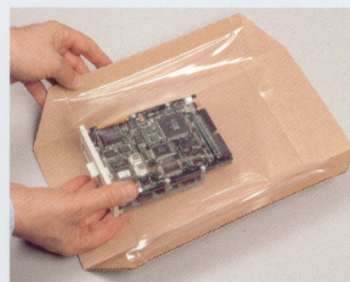

Korrvu® retention packaging uses elastomeric film to safely surround and secure the product while providing excellent visibility and product display.

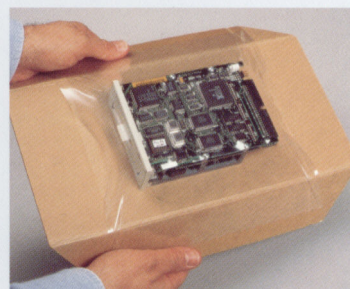

For this manufacturer, the flexible retention film accommodates a wide variety of spare parts and accessories.

Korrvu® retention packaging is a versatile, economic alternative to traditional packaging

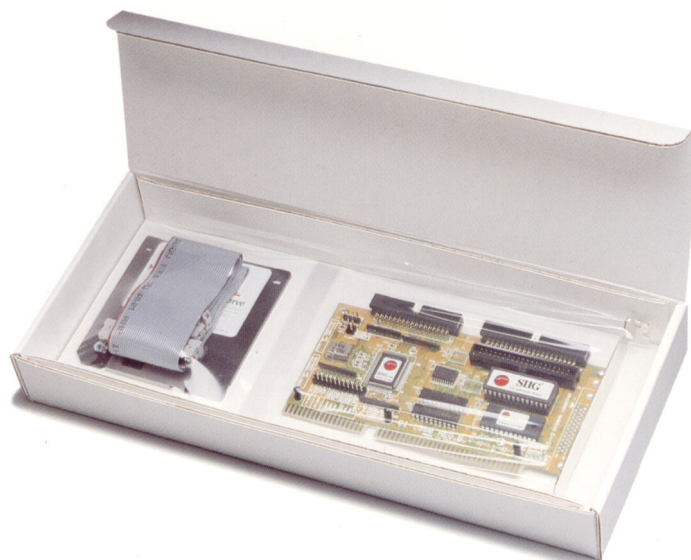

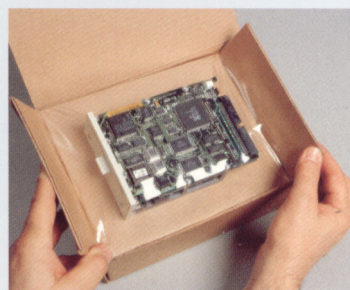

The side flaps fold upward, loosening the film and forming an "insertion pocket" for easy product loading.

The side flaps are folded down to tighten the retention film and hold the product securely in place.

The finished package is easily inserted into the carton and is ready for shipment.

Packaging solutions engineered for your specific needs

Korrvu® packaging provides award-winning solutions that meet today's packaging requirements. Using innovative materials and proprietary design techniques, Korrvu® packaging is a dynamic packaging resource that provides excellent product presentation, versatility, space savings and environmental excellence.

Korrvu® suspension packaging suspends your product in the air space of the shipping container between two layers of highly resilient low-slip film. The patented design suspends your product away from the impact, providing consistent protection for fragile products even after repeated drops.

Korrvu® retention packaging holds your product securely within its proprietary retention frame. This offers excellent protection for products that are semi-rugged and require a lower degree of shock protection during the shipping cycle.

The essence of Korrvu® packaging is the strong, highly resilient low-slip film that surrounds the packaged product, protecting it from shock and vibration.

Put us to the test-free of charge

All Sealed Air packaging offers excellent cushioning performance. This means that we can invariably reduce the size of your current packaging and, of course the amount of material needed. This reduced volume and weight decreases your shipping, handling and storage costs while retaining maximum product protection.

Let us design a simple package for your product and test it to your standards. The results, and our proposals, will be prepared for you in a detailed report, totally free of charge.

Our package design capability

Our Package Design Laboratory at Kettering has been awarded the International Safe Transit Association certification - your guarantee of expert packaging design advice.

Our Products Protect Your Products®

AirCap®
Barrier-sealed bubbles

Cell-Aire®
CFC-free polyethylene foam

Around the world Sealed Air manufacture and market a wide variety of packaging materials and systems to protect products from damage caused by shock, vibration and abrasion.

Sealed Air has more than 90 manufacturing locations. Our wealth and depth of technical expertise is freely available to all our customers.

Our products are supported by:

- **Consultative sales and technical staff** to work with you to determine the most cost-effective packaging solutions.
- **Package evaluation**, design and testing.
- **Training** to ensure your personnel are using our products effectively and economically.
- **Local full line distributors** providing complete sourcing for all your packaging needs.
- **System installation and service** by local Sealed Air representatives.
- **Worldwide availability** for customers with multi-national requirements.
